LOCAL DATA WORKSPACE

Local AI Evaluation Workbench

Keep dataset, comparison and report records in one local SQLite workspace.

QUICK START

Open: Repository README

Run locally:

```
npm start
```

Next: Open http://127.0.0.1:4320

YOUR FIRST SESSION

01 Install Node.js 24 or newer. Open a terminal in the repository and run npm start.

02 Create a dataset record, then add comparison records with model names and measured latency when available.

03 Search, edit or delete records from the matching collection.

04 Import CSV or JSON records and export JSON for a backup. Run npm test for acceptance checks.

DATA AND PRIVACY

Records are stored in data/app.sqlite on this computer. Back up that directory yourself. The server listens on loopback by default.

LIMITS TO KEEP IN MIND

Despite its name, this version does not run prompts against models or calculate quality, latency or cost. Enter measured values yourself. It is single-owner.
